

WEATHER ALERT

PM Update... Snow has settled well south of the area for the afternoon and still looks to remain there for the rest of the daytime. Start-time tonight remains difficult to pin down as that snow starts lifting northward, however it is fighting with dry air coming down for the Northeast. Thus, it will be a battle where spotty/occasional areas of flurries and light snow try to move in late evening through pre-dawn. Snow becomes much more likely 4-7 AM. It gets increasingly steady and we'll go to sleet quickly. Most of the predicted total is likely sleet and that is a good amount as more than a coating of sleet is dense and difficult to remove. Then it's over to rain late morning / early afternoon. Some spots are around 32 during that point, so rain can freeze on contact and lead to ice. We expect to warm slightly later in the daytime and that ends the ice threat going into Tuesday Night. The exception, could be places further from Route 1 (Pennington, Hillsborough) as they may hang onto ice until early evening.

OVERVIEW				
Start Time	End Time	Total	Snow/Sleet Confidence	
Tuesday 4:00 AM - 7:00 AM	Tuesday 2:00 PM - 5:00 PM	0.5 - 2.0" Snow/Sleet	Coating - 0.5"	15%
Occ'l light snow possible 10 PM - 4 AM	Some far NW spots from Route 1 may ice longer	<i>Plus coatings of ice from freezing rain</i>	0.5 - 2.0"	60%
			2.0 - 3.5"	25%

HAZARDS		
Hazard	Threat	Description
Ice	Moderate	Coating of ice from freezing rain, especially NW of Route 1
Snowfall Rate	Moderate	A period of moderate to even heavy snow/sleet (mainly sleet) is likely tomorrow daybreak and morning.

FORECAST	
Monday	Mostly cloudy and likely staying dry. High 34 - 37 NE 5 - 10 mph
Mon Night	Cloudy as intermittent and mainly light snow is possible 10 PM - 4 AM. More likely and steadier 4 - 7 AM as it mixes with sleet near daybreak. Coating - 1.0" of Snow/Sleet Low 26 - 30 NE winds 7 - 17 mph
Tuesday	Snow/Sleet becomes mainly sleet not long after daybreak (falling steadily). This transitions to rain/freezing rain 10 AM - 2 PM. Temps are slow to warm above freezing by the end of the day. 0.5 - 2.0" of Snow/Sleet (Storm Total, mainly sleet) Coating of Ice Temps in AM 28 - 32, PM: 32 - 36 NE winds 10 - 25 mph
Tue Night	Persistent rain showers with some steadier periods of rain. The rain ends in the pre-dawn and it is windy at times. 0.40 - 0.80" of Rain Temps rise to 35 - 42 Varying winds become West 10 - 25 mph late.
Wednesday	Windy and partly sunny. High 40 - 45 W winds 15 - 25 mph, gusts 35 - 45
